

Project Documentation: Churn Prevention Modal

Overview

The Churn Prevention Modal project aims to provide a seamless experience for users considering unsubscribing from a service. It presents a modal window with a series of steps to guide users through the unsubscription process. The project is structured into components, utilities, store, types, and tests, facilitating easy maintenance and extensibility.

File Structure

src/

components/: Contains main components for the modal window and offer display.

UI/: Stores shared components such as Close Button, Indicators, and Help Section.

Steps/: Represents a component for each step of the churn prevention progress.

Config/: Holds options for unsubscription reasons.

Router/: Initialized but not used as there is no need for routing.

Store/: Holds all the store structure in separate files.

Types/: Consists of all needed TypeScript interfaces.

Utils/: Contains mock API integration and functionality to save data to local storage.

Tests/: Holds both unit and end-to-end tests.

Main components include comments for a deeper understanding of the processes.

Dependencies

The project relies on common dependencies such as Vuex, Vue Router, Jest, and Cypress for testing. There are no specific dependencies beyond these common ones.
